

- Don: documents with $\text{credibility}(d) \neq \text{ok}$ or $\max(\text{dense_sim}, \text{sparse_sim}) < \sigma_{\min}=0.20$ are excluded; deduplication by key $\kappa(d) := d.\text{doc_id}$ collapses overlap between the dense ($k_d=7$) and sparse ($k_s=3$) branches; the returned set has cardinality at most $k_{\text{final}}=10$.
